

## SHADY LAWN SEED MIXTURE

### SHADE TOLERANT LAWN SEED

**Shady Lawn Seed Mix** is designed to provide good shade tolerance requiring normal to low maintenance. Creeping Red Fescue and Chewings Fescue are the dominant grasses in the mix and will provide good quality turf where 30% - 60% shade exists. It will provide a quality turf on a variety of soil conditions. The Kentucky Bluegrass used will dominate in the less shaded portion of the turf area. The fine-leaf Perennial Ryegrass germinates and establishes very quickly and provides protection for the slower germinating grasses and lends increased disease resistance to the turf stand. All of the grasses used in this mixture blend nicely in both color and leaf texture.

#### Recommended Use

**Shady Lawn Seed Mix** is designed to perform best in areas that have 30% - 60% Shade, but will perform even in full sun environments. It can be used successfully on a variety of soils existing in most sites, including home lawns, commercial properties, parks, schools and other turf area receiving normal to low maintenance.

#### Suggested Maintenance

Best results are achieved with one or two fertilizations per growing season and irrigation as needed to prevent plant dormancy. The recommended mowing height is 2 – 3 inches with mowing frequency being timed so that no more than approximately 1/3 of the leaf blade is removed with each mowing. Higher heights of cut will increase the shade tolerance of the grasses used in this mix

#### Seeding Rates

- New turf: 4.5 – 6.5 lbs./1000 sq. ft. (200-300 lbs/acre)
- Overseed Rate: 3.5 – 5.5 lbs/1000 sq. ft. (150-250 lbs/acre)

#### Establishment

- Germination: 6-12 days under ideal conditions

#### Shady Lawn Seed Mix\*

20% Carly Perennial Ryegrass  
40% Boreal Creeping Red Fescue  
20% Intrigue Chewings Fescue  
20% Bonaire Kentucky Bluegrass
