

## SUN & SHADE LAWN SEED MIXTURE

### ALL PURPOSE LAWN SEED

**Sun & Shade Lawn Seed Mix** is designed to provide rapid germination and establishment, providing a quality turf requiring normal to low maintenance. It is best used where conditions provide medium amounts of sun and shade. It will provide a quality turf on a variety of soil conditions. The Kentucky Bluegrass used had some shade tolerance and provides excellent turf density and pest resistance when maintained as mentioned above. The fine-leaf Perennial Ryegrass germinates and establishes very quickly and provides protection for the slower germinating grasses along with improved disease resistance. The fine fescues add shade tolerance to the turf stand and will perform in a low maintenance environment. All of the grasses used in this mixture blend nicely in both color and leaf texture.

#### Sun & Shade Lawn Seed Mix\*

30% Carly Perennial Ryegrass  
30% Boreal Creeping Red Fescue  
20% Intrigue Chewings Fescue  
20% Bonaire Kentucky Bluegrass  
\*Or equivalent depending on availability...

#### Recommended Use

**Sun & Shade Lawn Seed Mix** is designed to perform best in areas that have 30% - 50% shade. It can be used successfully on a variety of soils existing in most sites, including home lawns, commercial properties, parks, schools and other turf areas receiving normal to low maintenance.

#### Suggested Maintenance

Best results are achieved with one or two fertilizations per growing season and irrigation as needed to prevent plant dormancy. The recommended mowing height is 2 – 3 inches with mowing frequency being timed so that no more than approximately 1/3 of the leaf blade is removed with each mowing.

#### Seeding Rates

- New turf: 5 – 7.5 lbs./1000 sq. ft. (225-325 lbs/acre)
- Overseed Rate: 4 - 6 lbs/1000 sq. ft. (175-275 lbs/acre)

#### Establishment

- Germination: 6-12 days under ideal conditions

#### KEY FEATURES

- Drought Tolerant
- Fast Establishment
- Lower Maintenance
- Shade Tolerant
- Wide Adaptability for any lawn condition
