

## TUFF TURF SEED MIXTURE

Drought Tolerant Premium Seed Blend for Tough Soils

**Tuff Turf Seed Mix** is a combination of improved turf type Tall Fescue with low management Kentucky Bluegrass, Creeping Red Fescue, and fine textured Perennial Ryegrass. The perennial ryegrass is included primarily to provide quick germination and establishment which will stabilize the site while the slower germinating grasses are becoming established. This mixture has extremely good drought tolerance and will perform nicely on a variety of soil conditions. **Tuff Turf** will adapt to full sun to reasonably heavy shade conditions. It is best used where budgets dictate that input levels are low and in fact low levels of input are preferred.

### Tuff Turf Seed Mix\*

30% 2<sup>nd</sup> Millennium Tall Fescue  
30% Raindance Tall Fescue  
20% Boreal Creeping Red Fescue  
15% Carly Perennial Ryegrass  
5% Tirem Kentucky Bluegrass  
\*Or equivalent depending on availability...

### Recommended Use

**Tuff Turf Seed Mix** is best suited for areas with limited management. It is ideal for use where higher traffic levels are a concern, but management levels will not allow improved Kentucky Bluegrass and perennial ryegrass to exist long term. It will perform in full sun to somewhat shaded conditions.

### KEY FEATURES

- Rapid establishment
- Drought tolerant
- Grows in poor soils with the right management practices
- Wear tolerant

### Suggested Maintenance

Best results are achieved under low to medium management levels. It should be mowed between 2-3 inches.

### Seeding Rates

- New turf: 7-10lbs./1000 sq. ft. (275-400 lbs/acre)
- Overseed Rate: 4-6 lbs/1000 sq. ft. (175-250 lbs/acre)

### Establishment

- Germination: 5-10 days under ideal conditions
